

Sreenivasa Sai Bhasanth Lakkaraju

Senior Full Stack Developer · Java · Angular · AWS

Boston, MA • 813-392-9590 • lakkarajbhasanth.1594@gmail.com • [linkedin.com/in/bhasanth](https://www.linkedin.com/in/bhasanth) • bhasanth.tech

PROFESSIONAL SUMMARY

Results-driven Senior Full Stack Developer with 8+ years of experience designing and delivering scalable, cloud-native applications across aviation, healthcare, e-commerce, and financial services. Proven track record building high-impact Angular and React frontends, event-driven Java/Spring Boot backends, and serverless AWS architectures. Experienced leading cross-functional teams, driving CI/CD best practices, and delivering measurable business outcomes — including a 43% device take rate and 25-point increase in successful transactions in production environments. Adept at translating complex requirements into clean, maintainable systems in Agile/Scrum environments.

TECHNICAL SKILLS

Languages: TypeScript, Java, JavaScript, Python, HTML5, CSS3

Frontend: Angular, React, Redux, Atomic Design, Bootstrap, Responsive UI, Cypress, Mocha

Backend: Node.js, Next.js, Express, Spring Boot, Hibernate, Kafka, IBM MQ, RESTful APIs, Microservices

Cloud & DevOps: AWS (S3, EC2, Lambda, API Gateway, CodePipeline), CI/CD, Jenkins, Docker, Kubernetes, SonarQube, Maven, Git

Databases: DynamoDB, MongoDB, DB2, Redis, Redshift

Tools & Methods: Agile/Scrum, JIRA, Adobe Experience Manager (AEM), MOVEit, Amazon Q, Mono-repo, JUnit

PROFESSIONAL EXPERIENCE

Sr. Full Stack Developer

Delta Airlines — Digital Cabin Experience

Sep 2024 – Present

Contracted via RiceFW Technologies Inc.

- Lead a team of developers designing and building a management dashboard that enables dynamic deployment of application builds to aircraft onboard servers, streamlining fleet-wide updates.
- Developed Angular components for an updated onboard Wi-Fi UX that achieved a 43% device take rate and 24% customer engagement rate, exceeding the 2025 annual targets.
- Executed a major code repository migration involving 20,000+ lines of code with zero production downtime.
- Contributed to the DeltaSync Wi-Fi platform, delivering a fast, free, personalized onboard Wi-Fi experience across Delta's fleet.
- Accelerated development and debugging using AI-assisted tools including Amazon Q, Kiro, and Microsoft Copilot.

Sr. Java Developer

Deloitte Consulting — Ohio Medicaid (OMES)

Jan 2024 – Aug 2024

Contracted via RiceFW Technologies Inc.

- Engineered custom Java integrations between Ohio Department of Medicaid (ODM) and vendor systems including Aetna, Buckeye, DODD, and ODA as part of the statewide Medicaid system integration.
- Architected and delivered an SFTP-based automated file transfer solution using Progress MOVEit, processing 100,000+ files per day with high reliability.
- Led the data migration effort transitioning member/patient data from the MITS legacy system to Ohio Benefits (OB).
- Designed and maintained Reference Data Management (RDM) pipelines for sharing medical code sets across vendor systems.
- Built Python scripts to compare transactional data across vendor systems and generate reconciliation reports, reducing manual audit time significantly.
- Implemented IBM MQ messaging for real-time data transfer between integrated systems, ensuring low-latency event-driven communication.

Java Developer

RiceFW Technologies Inc.

Jul 2023 – Dec 2023

- Owned the end-to-end development lifecycle of an internal project management tool — from stakeholder requirements gathering through design, implementation, and delivery.

- Built a Next.js/TypeScript backend with REST APIs, DAOs, and database entities to support repository management, pipeline visibility, and code quality reporting.
- Integrated Jenkins APIs to expose CI/CD pipeline metadata within the tool, giving teams real-time build visibility.
- Developed a React UI enabling teams to create repositories, manage pipelines, and monitor SonarQube code quality reports from a single interface.
- Established CI/CD pipelines and achieved 90%+ unit and integration test coverage on all services and entities.

Full Stack Developer

Delta Airlines — Digital Cabin Experience

Feb 2022 – Jul 2023

Contracted via Tata Consultancy Services.

- Designed a content framework for on-the-fly onboard Wi-Fi offer updates using Atomic Design Methodology in Angular, deployed across 25 flight tails with a roadmap for 500+ tails.
- Developed Angular integrations with partners including AMEX, Paramount+, and T-Mobile to enable personalized experiences on Delta Sync Exclusives.
- Built AWS Lambda functions connecting the onboard server, client, and ground APIs from Delta's Loyalty, Retail, and Payments teams for a seamless in-flight experience.
- Delivered a responsive online check-in application with Cypress/Mocha automation tests, increasing successful transactions from 63% to 88% in production (domestic, single-passenger, one-way itineraries).

Java Developer

CloudData Technology LLC

May 2021 – Feb 2022

- Researched distributed infrastructure solutions and authored technical documentation on popular architectures.
- Designed a cloud storage architecture in Kotlin and TypeScript to serve as a reusable baseline for future client engagements.

Software Development Engineer

Amazon — Devices (Warranty Services)

Jul 2020 – May 2021

- Designed an automation framework for onboarding device warranty configurations to the web catalog, reducing SLA from 3 weeks to seconds by leveraging existing internal tooling.
- Built a new multi-year warranty management platform with a React UI and Node.js backend, replacing a legacy system that managed 700M+ warranties.
- Supported client teams migrating from the legacy system to a new serverless architecture built on Lambda, API Gateway, DynamoDB, and Redshift.

Infrastructure Software Engineer

JPMorgan Chase & Co. — Global Technology Infrastructure

Jul 2016 – May 2018

- Designed and built RESTful microservices in Java/Spring Boot to manage storage resources for 7,000+ internal applications, with session management via Redis.
- Developed an interactive tool enabling non-technical teams to manage enterprise-grade AWS S3 storage (Dell EMC).
- Achieved 95% unit test coverage following Test-Driven Development (TDD) using JUnit.

EDUCATION

Master of Science in Computer Science

Aug 2018 – May 2020

University of Florida, Gainesville, FL

Bachelor of Technology in Information Technology

Jul 2012 – May 2016

VIT University, Vellore, India
